

Transaction Reporter

Transaction Reporter is a query, reporting, and data management tool that is used in conjunction with PeopleKey fingerprint readers and Fingerlan biometric management software.

This software package connects to the biometric database and allows users to quickly and easily run transaction reports based upon date, time, location, user, or type. Transaction data can then be printed, or exported in the form of customizable reports. User data and access privileges can also be updated.

Transaction Reporter makes it easy for users to monitor time & attendance data, run reports, and even check which employees are on site at any given time.

BIOMETRICS MADE SIMPLE

Features

Database Flexibility

Transaction Reporter supports both Access and SQL databases, just like Fingerlan. It connects to the database via an ODBC link.

Exporting

Once a report has been generated, it can be printed or exported as an Excel spreadsheet.

"Who's on Site" Reporting

Transaction Reporter captures data from Fingerlan in real time, so it can be used as a tool to monitor which employees are at a given job site at any point in time.

Built-In Alerts

Further to the "Who's on Site" reporting feature, Transaction Reporter can easily be configured to sound a notification when a particular individual has clocked in via one of the Peoplekey fingerprint readers on the network.

Filters

Transaction Reporter allows users to sort transaction data by date, time, location, user or type.

Column Sorting

Data is sorted by column, allowing users a familiar spreadsheet-like interface with no learning curve.

Remote Operation

Because Transaction Reporter runs on a client PC that is connected to the Fingerlan database, reports can be generated remotely, from anywhere in the world.

Fingerlan Updates

Transaction Reporter also allows administrators to remotely edit or delete user data and access privileges within Fingerlan. It's truly biometrics made simple.

The screenshot shows the Transaction Reporter application window. It features a sidebar on the left with various controls: 'Click to sort' with a blue arrow, 'Double click to edit', 'All users selected' with 'All' and 'None' buttons, 'Enter date range' with 'Starting from' (13/08/2007 00:00) and 'until' (22/08/2007 00:00) fields, 'Execute query' button, 'Query reports' button, 'Quick reports' button, 'Export' and 'Define' buttons, and 'Quit' button. The main area is a table with columns: Pin, First name, Last name, Select, Notify, and Status. The table contains 17 rows of data. The row with Pin 1003 is highlighted in red. Below the table, there is a status message: 'The status of a person in indicative not certain. Double click the status column to change'. At the bottom, there is a 'Key in pin number then enter' field with '9999', 'Total users 67, total templates 85', and 'Last update from Fingerlan was at 20/08/07 14:19'. A 'Maintenance' button is in the bottom right corner.

Pin	First name	Last name	Select	Notify	Status

System Requirements

Operating System
Windows XP/Vista/2003

Processor
Pentium 400 Mhz or faster

Memory
128 MB of RAM, minimum 100 MB
of available hard drive space
